The image features a wall covered in grey acoustic panels. Each panel is square with a circular cutout in the center. The panels are arranged in a staggered, grid-like pattern, creating a textured, three-dimensional effect. The lighting is soft, highlighting the texture of the panels. In the bottom left corner, there is a dark, rectangular object with a green and black marbled pattern.

ecoustic® Crescent + Edge

ecoustic® Crescent

Crescent is a pair of complimenting modular acoustic wall tiles that provide designers with the opportunity to create individual installations. The Valley and Plateau tile create bold landscapes from two flat planes, these take on a third dimension when using bold illumination. Sophisticated geometry is at the heart of these tiles.

ecoustic® Edge

Edge is an architectural acoustic wall tile that becomes a building block for near infinite brickwork patterns. Introducing a more refined scale tile encourages designers to make better use of the available wall space and enables the opportunity to create endless textural landscapes. The understated form is defined by a pronounced edge that catches light and casts shadows changing the nature of the installation depending on the time of the day.

Low-VOC and Greentag Level A certified, ecoustic® Crescent + Edge are based on low energy manufacturing and made from 100% polyester with a minimum of 50% recycled content. ecoustic® Crescent + Edge are available in 34 colorways.
